DR EHRENSTORFER™

REFERENCE MATERIALS FOR CANNABIS TESTING

One of the most comprehensive ranges of reference materials for analytical testing of cannabis and cannabis-related products

LGC Quality | ISO 17034 | ISO/IEC 17025 | ISO 9001

Since 1975, Dr. Ehrenstorfer™ has led the way in producing pesticide reference standards. Today, our portfolio has expanded to adapt to changing regulations and technology.

You'll find all our latest products at lgcstandards.com, including:

- ◆ Our comprehensive range of neat reference materials manufactured to ISO 17034 & ISO/IEC 17025
- ◆ New cannabis-related compound reference materials
- ◆ New pesticides and pesticide metabolite reference materials
- ◆ Stable isotope labelled reference materials
- ◆ A wide range of veterinary and pharmaceutical residue reference materials, including marker metabolites
- ◆ Popular mixtures for EPA and other regulatory methods

CANNABIS

What you need to know

As legislation of the multiple applications of cannabis and related products evolves, laboratory testing has become an integral part of the fast-evolving cannabis landscape. Both cannabis and hemp applications have expanded rapidly in the 21st century to include recreational and holistic use, and the legal status of these products has become ever more complex and significantly varied across the globe.

Cannabis market landscape

Global cannabis and hemp legalisation is causing the cannabis-related market to explode. Currently, this is the most pronounced in North America where hemp was federally legalised in the passing of the 2018 Farm Bill. This federal hemp legalisation coupled with the variable state-level acceptance of medicinal and progressive recreational uses of cannabis has created an extremely complicated regulatory landscape. For instance:

- Cannabis regulations are currently enacted by the individual states, and each differs slightly
- There are no pesticides registered by the EPA for explicit use on cannabis
- There is a lack of standardised testing methodology

In Europe, harmonisation of cannabis legislation still seems to be a long way off, with EU member states each introducing their own regulations. As the market develops in the US, it is likely that the EU will be watching closely as standards for methodologies are developed by bodies such as the AOAC and the Cannabis Analytical Science Program (CASP), which integrates with organisations such as UKAS (United Kingdom Accreditation Service).

The legislative and regulatory environment continues to develop, and analytical testing is becoming ever more prevalent and critical. Whichever regulations and methods inform your analysis for cannabis, it is essential to use reliable reference materials appropriate for your selected methods.

Dr. Ehrenstorfer is here to help

On the following pages you will find the extensive Dr. Ehrenstorfer range of reference materials to support your analytical requirements, including:

- Cannabinoids for potency testing
- Heavy metals, pesticides, residual solvents and mycotoxins for contamination testing
- Terpenes for quality testing

All measurements on our certificates of analysis (CoA) are carried out in accordance with ISO/IEC 17025 and the majority of our products are produced under the scope of our ISO 17034 accreditation, for the highest quality reference materials. For additional details on our products you can find our CoA's on **our website**.

Visit **lgcstandards.com** to explore the full and extensive range of over 9,000 Dr. Ehrenstorfer reference materials available for cannabis, food and environmental analysis, or **contact us** to explore our custom solutions options.

INTRODUCTION TO CANNLEARN

Free, app-based courses providing knowledge and skills to the cannabis testing industry.

The gradual legalisation and acceptance of cannabis and hemp around the world has sparked rapid growth in cannabis quality assurance testing. Dr. Ehrenstorfer is supporting laboratories to equip staff with analytical

measurement knowledge and skills by offering interactive and engaging training content that builds the scientific expertise required to operate effectively.

The benefits of cannlearn app-based courses

- Dr. Ehrenstorfer in collaboration with the UK National Measurement Laboratory (hosted at LGC): trusted experts, supporting cannabis testing laboratories in their learning.
- Our analytical measurement scientists sharing decades of experience with you.
- Free, easy to use bite-sized courses, delivered via a microlearning app, that enables you to learn at your own pace and convenience.
- Available from anywhere with an internet connection, CannLearn delivers independent learning via a range of devices on the move, for maximum convenience.
- CannLearn provides consistent expert training, minimising time away from the bench, advancing knowledge and competencies for personal development and identifying training needs.

TOPICS

- Introduction to why testing/screening of cannabis is required.
- Introduction to quality assurance, including method validation, measurement uncertainty, traceability and quality control.
- Things to consider before carrying out an analysis.
- Laboratory set-up, including contamination control.
- Health & safety.

"It is a nice introduction to the cannabis industry."

CANNABINOIDS

CANNABINOIDS

MULTICOMPONENT SOLUTIONS

Cannabinoids are both psychoactive and non-psychoactive compounds produced in the cannabis plant, and these compounds have been key drivers in the rapid development of the cannabis-related industry in the 21st century. Cannabinoids have demonstrated potential therapeutic efficacy in the treatment of pain, mood disorders and inflammatory diseases. The effects of

cannabinoids can vary significantly by composition, purity and quantity, and as such are a key subject of legislation and regulation. Therefore, the use of reliable reference materials for potency testing is critical to ensuring the compliance and safety of cannabis-related products. As we continuously grow this range of products please see our website for our most up-to-date product listing.

TERPENES

TERPENES

MULTICOMPONENT SOLUTIONS

Terpenes are molecules composed of multiple isoprene units that give cannabis strains their identifying aromatic characteristics. Terpenes have been shown to have anti-inflammatory properties as well as modulating and modifying the therapeutic and psychoactive

effects of cannabinoids, and are an area of increasing manipulation to develop the applications of cannabis in a wide range of products. The analysis of terpenes is critical for the identification and efficacy assessment of cannabis and related products.

MYCOTOXINS

MYCOTOXINS

MULTICOMPONENT SOLUTIONS

Mycotoxins are natural products produced as secondary metabolites by fungi that grow on crops in the field or in storage after harvest. Both acute and chronic exposure to mycotoxins and their metabolites cause many types of toxicity, including hepatotoxicity, genotoxicity, and neurotoxicity. It is important to protect consumers of

cannabis-related products from potential harm caused by the presence of mycotoxins by ensuring testing is robust and reliable. Dr. Ehrenstorfer offers a range of high quality mycotoxins reference materials to support your analysis of cannabis and related products.

PESTICIDES

PESTICIDES

MULTICOMPONENT SOLUTIONS

Testing for pesticide residues is mandated by many US states and strongly recommended by all others in the production of cannabis and related products. Effective analysis for pesticides is a critical part of protecting the food chain and consumers. Dr. Ehrenstorfer has been

providing high quality pesticide reference materials for over 40 years, and has an unrivalled portfolio of pesticide compounds and metabolites to support your analytical testing for residues in cannabis.

RESIDUAL SOLVENTS

RESIDUAL SOLVENTS

MULTICOMPONENT SOLUTIONS

Residual solvents are organic volatile chemicals that are used or produced in the manufacture of drug substances or excipients, or in the preparation of drug products. The solvents are not completely removed by practical manufacturing techniques, including those

often used in the extraction processes for cannabis-based products. These impurities can be toxic, which is why residual solvent analysis is a critical element of cannabis testing.

MULTICOMPONENT SOLUTIONS

Dr. Ehrenstorfer™ offers a portfolio of standards for cannabis metal impurity testing.

Designed to meet your lab's need for standards that are accurate, precise and traceably certified for concentration and uncertainty. These standards are prepared from high-purity raw materials in our facility accredited to ISO 17034 and then are certified in our testing laboratory accredited to ISO/IEC 17025. They are analyzed according to the rigorous NIST High-Performance ICP-OES Methodology, utilizing NIST 3000-Series SRM calibrants; thus providing direct, NIST SRM traceable certification.

Our multi-element mixes have elements conveniently grouped to provide comprehensive coverage of global testing requirements, including US state-specific regulatory standards. In addition to their convenience, our extensive quality control makes these products a clear choice for value.

If you have a need not met by the products listed, please contact us to discuss a custom solution.

AXIO
PROFICIENCY TESTING

CANNABIS

Cannabis & Related Products

Increasingly cannabis is being legalised and used as a medicinal product in a range of markets. This legalisation process includes requirements for QC testing and therefore PT to assure the quality of the analytical data.

In addition many novel products (foods, beverage and supplements) are being developed which contain cannabis extracts (minus the psychoactive cannabinoids) for health benefits

The primary aim of the CANNABIS Proficiency Testing Scheme is to enable laboratories performing the analysis of cannabis to monitor their performance and compare it with that of their peers. Cannabis PT also aims to provide information to participants on technical issues and methodologies relating to testing of Cannabis.
